

ABSTRACT OF THE DISCLOSURE

A protective cover for an electronic device, such as a computer, is provided herein. In one implementation, the protective cover is for an electronic device having a display screen and user inputs, the cover comprising a cover portion; and a coupling portion adapted to removably couple the cover portion to the device, and adapted to allow the cover portion to be selectively positioned between a first and a second position. In the first position, the cover portion is positioned proximate to the user inputs and is sized to cover at least one user input and in the second position, the cover portion is positioned proximate to the display screen and is sized to cover at least a portion of the display screen. In preferred form, the cover portion is configured to limit an angle of view of the display screen through the cover portion when in the second position.
